BODY SHOP ADHESIVES
STRONGER BONDS
START WITH SIKA
LIGHTER | STRONGER | SAFER | QUIETER | GREENER
YOU NEED TO FIND WAYS TO MAKE YOUR NEXT VEHICLE LIGHTER, STRONGER, SAFER, QUIETER OR GREENER.

SO WHERE DO YOU START?
Start with a trusted partner that can deliver global innovation on a localized scale, wherever and whenever it’s needed. Start with a commitment to continuous improvement, and the knowledge that it takes years to become an overnight success. Start with a collaborative approach that can bring together great minds without knocking heads. Start with pioneering innovation that clears a path for the vehicles of the future, no matter what form they take.

START WITH SIKA
With a full suite of bonding, damping, sealing and reinforcing solutions, Sika is a key strategic partner for both OEMs and component suppliers. By collaborating on advanced development projects and engaging early in program development, we help customers optimize designs, identify cost savings and reduce complexity.

Lighter, Stronger, Safer, Greener

Sustainable vehicle design has become a major factor in car production. Performance, economic, legislative and environmental targets all influence OEM thinking and are driving the need for durable body shop adhesives that can improve stiffness, crash durability and fatigue performance - as well as contribute to weight reduction.

As body shop joining has evolved from purely mechanical fastening techniques to hybrid joining including extensive use of adhesives, our versatile, one-component SikaPower® product range has become the go-to solution for new vehicle production including the challenges introduced in joining the same, new or different combinations of materials.

Crash resistance performance of a vehicle becomes highly visible only in the event of a crash. In this case it is vitally important that structural adhesives provide exceptional impact resistance to withstand dynamic stresses during collision events by absorbing as much energy as possible. SikaPower® products are formulated specifically for these challenging applications.

SikaPower Body Shop Adhesives

Our body shop adhesive product portfolio covers all bonding requirements: structural, crash resistant, hem flange and our newest mixed material bonding products that address specifically Delta/Alpha challenges.

- SikaPower®-480, -492 and -494 structural adhesives
- SikaPower®-487, -493, -497 and -498/3 and -499 crash resistant
- SikaPower® -510 C MBX and -533 MBX enable mixed material bonding

SikaSeal Anti-Flutter Adhesives

SikaSeal® rubber based products are typically used on body structure areas, roof rails and hang-on parts such as doors, hoods and tailgates. At the OEM, or at the tier, our full line portfolio covers the entire vehicle, with products specifically formulated and tested to avoid bond-line-read-through (BLRT).

- SikaSeal®-700 – non expanding
- SikaSeal®-710 LS2 – medium expanding
- SikaSeal®-710 SR – high sag resistance
- SikaSeal®-712 – high corrosion resistance
- SikaSeal®-710 UWS – universal weld sealer

All SikaSeal® materials can be applied as continuous bead, spotted bead or dot, or as a combination of all three applications.
>25 MILLION VEHICLES MADE LIGHTER, STRONGER AND SAFER EACH YEAR

Each year our body shop adhesives help make more than 25 million vehicles lighter, stronger and safer, enabling weight reduction without impacting vehicle dynamics and safety, a critical engineering challenge. Crash resistant bonding is now the most important joining process in the body shop, due to the direct influences of the car body structure sections during a crash event. SikaPower® products fulfill or exceed the customer requirements.

STRONGER BONDS START WITH SIKA

as evidenced by decades of high performance applications and more than 25 million vehicles assembled annually at leading OEMs. Our full range portfolio of SikaPower® and SikaSeal® adhesives is used throughout the vehicle and services all body shop categories; crash resistant, structural, hemming and anti-flutter products. Achieving good bonds, however, is not only determined by the products alone. They begin early in the design process with partnerships, in-depth understanding of design challenges, targeted performance parameters and substantial review of the materials to be joined. The end result is better relationships, and better vehicles.

CRASH RESISTANT BONDING

SikaPower® crash resistant adhesives contribute to a significant increase in energy absorption during crash events, which makes them an ideal solution in comparison to traditional metal joining techniques. Superior impact peel values and reduction of car body intrusion space make SikaPower® products an increasingly effective bonding solution for high-performance vehicles. Lab tests on crash beams confirm intrusion reduction of 20% with the use of SikaPower® crash resistant adhesives.

STRUCTURAL BONDING

Structural bonding with SikaPower® delivers a long list of performance and process benefits, including increased car body stiffness, excellent oil absorption, wash-out resistance, long-term corrosion resistance, a substantial reduction in the number of spot weld points and long shelf life.

HEM-FLANGE BONDING

Although typically used with hang-on parts, the inclusion of glass beads also makes SikaPower® products suitable for use in body structures for hem-flange bonding. The advantage of the glass beads includes “zero gap” avoidance, which leads to better adhesion, mechanical performance, aging and corrosion properties.

ANTI-FLUTTER MATERIALS

In anti-flutter and spot welding paste sealing applications, SikaSeal® adhesives provide excellent adhesion to standard OEM steel and aluminum substrates. They offer vibration free panel isolation joining, while also protecting durable metals against age-related corrosion from the elements. SikaSeal® adhesives are outstanding in preventing bond-line-read-through (BLRT) and do not reduce the strength of welding spots. They can also be utilized as a spot welds paste adhesive.
LIGHTER WEIGHT
SikaPower® – Car Body Improvement

WEIGHT REDUCTION
From our first developments more than two decades ago, SikaPower adhesives are now in their fifth generation of innovation. We offer an extensive product range addressing each area of performance expectation for body assembly, including today’s and future demands for mixed material bonding.

MIXED MATERIAL BONDING EXPERTISE
Sika’s unique SikaPower® structural adhesives and our engineering process in understanding Delta ∆ Alpha (different coefficients of mixed material expansion/contraction), enable mixed material bonding of lighter materials including aluminum and carbon fiber reinforced plastic, with traditional high-strength steels.

100 kg of potential weight reduction per car (up to 10%) can be achieved with SikaPower® and SikaPower® MBX solutions.

SIKASEAL® FULL RANGE PORTFOLIO
Performance You Can’t See – Bond-Line-Read-Through Prevention

SIKA OFFERS TAILOR MADE SOLUTIONS TO MULTIPLE BODY SHOP BONDING CHALLENGES
You typically cannot win a race with one entrant, nor can you build the body structure of the future with one product that limits design flexibility. Sika’s extensive range of SikaSeal® anti-flutter and mastic products for BiW offers tailored products to specific challenges faced in the design of tomorrow’s vehicles.

SikaSeal® BODY SHOP ANTI-FLUTTER ADHESIVES

| SikaSeal®-730 UWS | + | ++ | +++ | + |

SIKASeal®-730 is outstanding in preventing bond-line-read-through (BLRT) and it is a universal adhesive for anti-flutter, mastic and spot weld applications. This product shows excellent adhesion to different aluminum and steel grades.

SikaSeal®-730 is applied in the body shop and expands in the e-coat oven. The product can be used in overhead and regular applications. It is suitable for use as spot welding, mastic and anti-flutter adhesive in all areas of the car body, especially on the hang-on parts and in the roof area.

SikaSeal®-730 UWS PROVIDES ONE PRODUCT FOR MULTIPLE SOLUTIONS
SikaSeal®-730 is outstanding in preventing bond-line-read-through (BLRT) and it is a universal adhesive for anti-flutter, mastic and spot weld applications. This product shows excellent adhesion to different aluminum and steel grades.

SikaSeal®-730 is applied in the body shop and expands in the e-coat oven. The product can be used in overhead and regular applications. It is suitable for use as spot welding, mastic and anti-flutter adhesive in all areas of the car body, especially on the hang-on parts and in the roof area.
MULTI MATERIAL DESIGN
SikaPower® MBX performance to compensate Delta Alpha

THE SikaPower® PRODUCT PORTFOLIO includes crash resistant, structural and e-coatable adhesives; all formulated to meet or exceed demanding design performance. All SikaPower® adhesives are available with or without glass spheres, to enable the required minimum bond line distance between substrates and to control bondline adhesive thickness. Common substrates in body shop applications for SikaPower® adhesives include all types of steel, aluminum and carbon fiber reinforced plastics (CFRP), and combinations of these substrates, in mixed material joining. Sika also answers the call for even more unique adhesives for mixed material joining with NEW SikaPower® MBX; formulated specifically to account for the differences in thermal expansion and contraction coefficients that must be considered during both the design and assembly process.

2 SIDE WALL AREA
All side wall applications with SikaPower® adhesive.

3 SIDE WALL FRAME
Crash relevant part of the vehicle is bonded with SikaPower®.

Following global automotive megatrends, technical requirements on one component crash durable adhesives are continually increasing. A large variety of bonding surface substrates including many steel types, several aluminum and a growing number of fiber grades are moving performance challenges to higher requirements and specification levels.

SikaPower® MBX technology and advanced car body design are helping the automotive industry to solve the challenges of differences in thermal expansion, typically experienced with mixed material bonding. The solution helps OEMs to realize the technical and commercial benefits of modern car body design. New assembly challenges presented by BEV and hybrid vehicle designs can readily be addressed within our extensive product offering. To stay ahead of the curve, Sika continues to develop the highest performance level BIW adhesives for today’s customer needs, and for their future vehicles.

HIGHEST PERFORMANCE FOR CRASH BODY REPAIR – EXCELLENT CRASH PERFORMANCE FOR MAXIMUM SAFETY

Sika technologies also follow the vehicle into service, meeting same quality demands including strength, application properties and corrosion resistance when vehicles enter the repair shop. The high performance product range for repair addresses this OEM requirement and allows vehicles to return to service “as good as new”.

The two component epoxy technology of SikaPower®-477 R provides the highest levels of toughness without compromising on mechanical strength and static load capacity. Sika’s toughened epoxy adhesives outperform the state-of-the-art two component epoxy adhesives – either brittle or flexibilized formulations – in terms of durability, fatigue and impact resistance. As a result they are becoming the preferred choice for crash body repair in the automotive aftermarket.

BENEFITS

Unmatched impact resistance
Exceptional energy absorption capacity
High mechanical strength
Excellent crack resistance
Superior fatigue performance
Convenient uTAH cartridge packaging

APPLICATION

Car body panel repair
Body structure repair

NEW TECHNOLOGY: MIXED BONDING EXCELLENCE (MBX)

Mixed material joining of steel – aluminum, steel – carbon fiber or aluminum – carbon fiber is possible with SikaPower® Mixed Bonding Excellence (MBX) products, which provides support to resolve Delta-Alpha issues. At the same time it provides galvanic separation that improves protection against corrosion and increases vehicle durability. This technology is unique to Sika.

MBX APPLICATIONS

Crash-relevant body structures
Mixed material bonding throughout the vehicle
Hem flange applications

BENEFITS

Superior performance – hybrid adhesive systems with high-energy absorption
Excellent aging durability
Increased car body stiffness – high e-modulus and Tg
Cost saving and sustainable – reduction of spot welding points
Excellent wash-out performance
Superior mixed material bonding

TYPICAL APPLICATIONS FOR THE SikaPower® CRASH RESISTANT ADHESIVES

1 CENTER TUNNEL AND FLOOR PANEL SECTION
Crash resistant mixed material adhesive application.

2 SIDE WALL AREA
All side wall applications with SikaPower® adhesive.

3 SIDE WALL FRAME
Crash relevant part of the vehicle is bonded with SikaPower®.
SikaSeal® PRODUCTS CARRY UNIQUE CHARACTERISTICS; their contribution to the prevention of bond-line-read-through. The properties of SikaSeal® are based on proprietary building blocks yielding matrix designed materials that compensate for typical read through experienced in joining techniques. Bond-line-read-through prevention, and the compensation for it, becomes even more important as thinner gauge panels and lighter weight materials are introduced in design. Further, Sika advanced understanding of delta-alpha (Δα) effects – including those of our SikaSeal® products – has contributed over decades to the development of our rubber-based technology.

SikaSeal® adhesives are delivered as bulk material and applied by cold or warm pumping equipment. In most cases, piping at the end of the dispensing system, especially between doser and nozzle, is pre-heated in order to ensure the same application properties over all climate seasons. Applications are preferably done automatically by robot but in some cases manual application is implemented as well.

QUIETER VEHICLES START WITH SIKA
SikaSeal® adhesives are outstanding in preventing bond-line-read-through (BLRT) and do not reduce the strength of welding spots. In anti-flutter and spot welding paste sealing applications, SikaSeal® adhesives provide excellent adhesion to standard OEM steel and aluminum substrates, as well as protecting the metal against age-related corrosion. They can also be utilized as a spot welding paste.
INNOVATION, IT STARTS WITH PASSION

AT SIKA, WE BELIEVE that a truly innovative company is one that starts with a culture within which a passion for innovation and creativity thrive. An innovative company should also take a customer-focused view; one that anticipates customer needs with a thorough understanding of key market trends.

LIGHTER
We have a full range of products which enable our customers to make their vehicles lighter. For example, we were the first to engineer body shop adhesives (SikaPower®), which enable mixed-material bonding of lighter materials such as aluminum, carbon fiber reinforced plastic, as well as traditional and high strength steels.

STRONGER AND SAFER
We were the pioneer in vehicle exterior parts bonding with our Sikaflex® + Booster and SikaForce® products and our SikaReinforcer products, which not only help stiffen the vehicle for better overall dynamics but also improve crash performance and increase vehicle occupant safety.

QUIETER
We provide solutions that make vehicles quieter. SikaBaffle® seals noise pathways, while SikaDamp® reduces the body panel vibration that contributes to audible noise in the vehicle. Both products are engineered for best-in-class weight-to-performance ratio. Used together, or separately, our industry-leading acoustics solutions improve vehicle occupant comfort.

GREENER
We were the first to establish water-based pre-treatments and polyurethane hotmelt systems with low monomeric isocyanate content and reactive polyol hotmelts free of classification to the automotive interior market – a more environmentally friendly approach that easily outperforms the industry’s previous generation of products.

VALUE-ADDED INNOVATION
We continuously develop new, cost-effective solutions, which allow our customers to use less material or reduce complexity in their manufacturing process. SikaPower® structural adhesives, for example, allow the reduction of welds in vehicle body sections, while strengthening overall crash durability. Anticipating megatrends we also offer a full range of solutions for assembly of e-mobility components and vehicles.
